

HomeHub Modular Residential Energy Storage

HomeHub - simply more freedom:

Storing energy and using it on demand.

■ We set the highest standards for the performance and design of the HomeHub from the very beginning. The result is a modular system, based on 2.5 kWh modules, which can easily be extended to meet the changing demands of a family or business.

Any storage device requires a corresponding inverter. The choice of inverter is crucial as it converts the direct current (DC) produced by your solar system into alternating current (AC) that is needed to operate all of your devices.

A list of all compatible inverters can be found on our website: www.gs-hub.com

Perfect design

HomeHub was developed in Europe. The main focus was on top performance as well as design and flexibility.

Indoors and outdoors

The HomeHub features a robust and elegant stainless-steel housing and can be used indoors as well as outdoors.

Glass door

A glass door enables you to view all the operating modes of the system at a glance.

Intelligent controller

The intelligent controller manages the storage modules and thereby ensures a long service life and perfect performance of the HomeHub.

Modularity

You can start with a small system and add additional modules as your requirements grow.

Cloud based

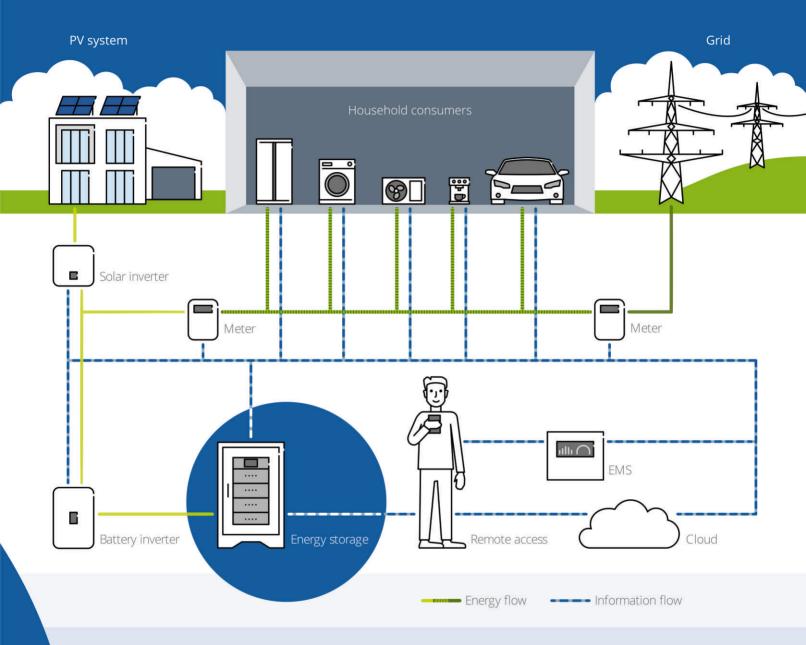

The control unit in the energy management system is the heart of the HomeHub. No matter where you are, you can monitor and control your HomeHub with a smartphone or tablet computer.

The issues of **system safety** and **longevity** are of great importance to us, which is why we have chosen **lithium iron phosphate** battery cells. In the event of a power failure, our battery system reliably provides the

necessary energy to supply your connected devices and ensures that, for example, computers can continue to operate reliably **(UPS function)***.

^{*}Depending on the installed inverter.

Generation and optimal use of solar energy: smart control and efficiency throughout the entire house

The HomeHub family

HomeHub - Always in control:

The integrated monitoring system.

■ The elegant HomeHub system can do more than simply store energy: the master module with a battery management system (BMS) also provides you with a clear overview of all the processes in the individual storage modules that you can easily expand yourself.

The separate energy management system (EMS) enables the central control of each individual consumer and gives you an overview of the energy you produce and consume.

The HomeHub system allows you to optimize your own energy consumption in such a way that you consume the energy that you produce yourself in order to achieve a higher degree of self-suff ciency and a higher self-consumption rate.

You can operate everything via a touchscreen on site or, regardless of where you are, you can also monitor and control the system performance online at any time via a mobile, web-enabled device.

Technical data overview.

Characteristic	2.5 - 10 kWh system	12.5 - 40 kWh system
Maximum energy	10 kWh	40 kWh
Maximum capacity	200 Ah	800 Ah
Max. charge-/discharge current	200 A (@ 25 °C) ²	240 A (@ 25 °C) ²
Max. charge-/discharge power	10 kW (@ 25 °C)	12 kW (@ 25 °C)
Charging time	>1-2 h	>2-4h
Voltagerange	43.2 V _{dc} - 58.4 V _{dc}	
Max. number of battery modules	16	
IP rating	IP55	
Protection class	III (SELV/PELV)	
Communication ports	CAN, Ethernet	
Battery management system	Yes	
Software updateable	Yes	
Uninterrupted emergency power	Yes (for AC depending on bettery inverter)	
Adjustable depth of discharge	Yes, battery profiles can be selected between 70% and 97% (Standard and recommended 80%)	
Material	Stainless steel	
Chassis Empty weight	80 kg 176 lbs	
Weight	124-208 kg 273-460 lbs	316-784 kg 697-882 lbs
Dimensions (L \times W \times H)	(690 × 550 × 1100) mm (each Chassis stores up to 5 modules)	
Cell chemistry	Lithium-lron-Phosphate (LiFePO4)	
Nominal capacity	50 Ah (2560 Wh) / 51.5 Ah (2635 Wh)	
Maximum charging current	50 A (1 C @ 25 °C)	
Battery Module weight	28 kg 62 lbs	
Operating Temperature	-10°C to +55°C 14°F to 130°F	
Storage Temperature	-20°C to +60°C -4°F to 140°F	
Relative humidity	Up to 95% non-condensing	
Warranty	12 years basic guarantee Optionally expandable up to 20 years³	
Conformity	CE, RoHS, IEC 62619:2017/AS IEC 62619:2017, YDB 032-2009, UN 38.3	

² 50 A / 2,5kW each Batterymodule ³ subject to operating conditions
